

Provisional Estimation of Eligible WIC Participation for Calendar Year 2010, by County, Montana Date: May 24, 2011

Please use caution when interpreting 2010 projections. These data are not final because of lack of US Census data by age and by County and lack of Montana annual birth counts for 2010. These data will become available mid-year of 2011. Upon entering the 2010 data, projections for 2010 will be updated and projections for 2011 will be available. Projections for 2011 will also be used for projections for 2012. *Please note that "WIC served for 2010 are also projections because 2010 actual served data are not entered yet, (all data for given year are linked and relay on each other to give projections). The WIC number of actual served in 2010 will be entered at the same time when US Census and Annual Birth Data for 2010. That is why in some cases there is a negative (-) number for 2010.*

Provisional Estimation of Eligible WIC Participation for Calendar Year 2010, by County, Montana Date: May 24, 2011

Please use caution when interpreting 2010 projections. These data are not final because of lack of US Census data by age and by County and lack of Montana annual birth counts for 2010. These data will become available mid-year of 2011. Upon entering the 2010 data, projections for 2010 will be updated and projections for 2011 will be available. Projections for 2011 will also be used for projections for 2012. *Please note that "WIC served for 2010 are also projections because 2010 actual served data are not entered yet, (all data for given year are linked and relay on each other to give projections). The WIC number of actual served in 2010 will be entered at the same time when US Census and Annual Birth Data for 2010. That is why in some cases there is a negative (-) number for 2010.*

Provisional Estimation of Eligible WIC Participation for Calendar Year 2010, by County, Montana Date: May 24, 2011

Please use caution when interpreting 2010 projections. These data are not final because of lack of US Census data by age and by County and lack of Montana annual birth counts for 2010. These data will become available mid-year of 2011. Upon entering the 2010 data, projections for 2010 will be updated and projections for 2011 will be available. Projections for 2011 will also be used for projections for 2012. *Please note that "WIC served for 2010 are also projections because 2010 actual served data are not entered yet, (all data for given year are linked and relay on each other to give projections). The WIC number of actual served in 2010 will be entered at the same time when US Census and Annual Birth Data for 2010. That is why in some cases there is a negative (-) number for 2010.*

Data Limitations and Interpretation:

- The 2010 potential WIC eligible client estimates will be used for 2011 estimates. Not all the required data for 2010 are currently available to conduct the calculations for 2011 estimates. Subsequently, 2011 estimates will also be used to predict 2012 estimates. The following data for 2010 should be available mid-year of 2011:
 - Data from the MT Office of Vital Statistics (annual births)
 - US Census (population estimates)
- Lack of data for TANF, SNAP/Food Stamp for infants and children may affect the estimates for infant and children because infants and children not enrolled in certain programs such as Medicaid and TANF, but who are receiving SNAP/Food Stamp are adjunctively eligible for WIC. Medicaid data are included in the model but not TANF, SNPA/Food Stamp data
- US Census yearly figures are not estimates based on a survey based data. Therefore, the model may not provide the most accurate estimates for the number of infants and children
- 2009 WIC participation data may be affected by M-Spirit system implementation and other WIC programmatic changes causing substantial increase or decrease compared to estimates from prior to 2009
- WIC clients may attend a WIC clinic in a different county than the actual county the client resides in making it hard to estimate the numbers of WIC participation per county or clinic
- Counties with a very small WIC participation are difficult to provide meaningful statistical information such as the rate of participation
- WIC participants may change categories i.e., infant to child during the course of the year causing fluctuations from year to year by WIC category. For example, infants dropped from 6,599 in 2008 to 4,970 in 2009 (-1,629) causing children category to increase from 16,943 in 2008 to 18,812 in 2009 (+1,869).
- Estimated need for "Women" is a more accurate than the three subpopulations. This is because the model assumes that each eligible woman does not change subpopulations during the course of a year. In actuality, women who deliver during the year will.
